

## Inductive Charger System for TagTrans®

Our brand new inductive charging system for TagTrans® products is replacing the current solution.

The separate charger and pins and connector on the battery pack are only available as spare part or special request ....

The benefits are essential:

- no more pins and connector on the battery pack
- the special Egstone charger is obsolete, so no more problems with the connectors.

### TT-ACC-IC

The new battery pack:

- has the PCB with the sliding contacts as now and so its 100% compatible to the current solution.
- has a new cheaper rechargeable battery with almost same performance (see attached datasheet)
- the charger electronic is integrated in the battery pack

### TT-ACC-IC-Ex2

The ATEX approval will be available in a couple of month

(In the meantime we would have to ship the current version, if needed now...)

### TT-IC

The Charger Cradle has a Micro-B USB connector like most of the Smart Phones.  
You connect a standard Handy charger, that's all!

Cradle left OLD – right NEW

Battery pack; left OLD - right NEW

Ask for quotation if you want to replace your current charger to inductive charging.

Best regards  
Wolfgang Peiritsch
